

KEVIN KEITHLEY

ANALYST · SYSTEMS BUILDER · OPERATOR

Reston, VA · +1 703 899 1584 · kevkeithley@gmail.com · kevinkeithley.github.io · github.com/kevinkeithley

PROFILE

Analyst, systems builder, and operator with experience spanning economic forecasting, data science, software development, restaurant operations, and small-business ownership. Contributed to the IMF's Global Projection Model, earned an M.S. in Data Science from Tufts University, and now builds practical software and analytical systems grounded in firsthand operational experience. Skilled at understanding complex processes, identifying constraints, and turning analysis into useful tools and measurable improvements.

CORE CAPABILITIES

Economic & Operational Analysis · Process Automation · Applied Data Science · Software Development · Forecast Production · Data Visualization · Training & Documentation · Business Operations

PROFESSIONAL EXPERIENCE

Research Analyst, Economic Modeling Division — Global Projection Model Team **INTERNATIONAL MONETARY FUND | Washington, DC | 2010-2014**

- Supported production of international macroeconomic forecasts using the Global Projection Model, contributing data preparation, model execution, analysis, and written interpretation.
- Worked on the GPM production team to evaluate forecast results, investigate economic developments, and prepare analytical write-ups for internal reports and briefings.
- Built and maintained economic-modeling and data-processing workflows used in recurring forecast production.
- Automated portions of the data pipeline, reducing processing time and improving the consistency of model inputs and outputs.
- Prepared and delivered training on GPM workflows and model use to economists and other staff.

Kitchen & Catering Operations | Systems Development **MOOKIE'S BBQ | Great Falls, VA | 2016-Present**

- Work across kitchen production, catering preparation and execution, customer coordination, and operational planning.
- Help manage catering operations generating more than \$250,000 in annual revenue.
- Build analytical and software systems that address operational problems identified through firsthand restaurant experience.
- Developed an Excel/VBA and Power BI resource-planning system to reduce manual work, improve visibility, and prevent errors.
- Developed menu concepts and recurring specials adopted by the restaurant.

Founder & Structural Integration Practitioner **BODY TRANSCENDENCE LLC | McLean, VA | 2016-Present**

- Founded and operate an evidence-informed structural integration practice focused on complex movement and performance problems.
- Earned the trust of NHL player T.J. Oshie, providing specialized structural integration and performance-focused therapy for approximately four years.
- Redesigned the company website using mobile-first design principles, increasing online appointment requests approximately tenfold.
- Manage client acquisition, scheduling, service design, financial administration, and other business operations.

SELECTED PROJECTS

KitchenPi — Restaurant Operations and Training Systems

- Designed and deployed a local restaurant availability system using Python, Flask, SQLite, nginx, Raspberry Pi hardware, tablets, and an e-ink display.
- Built a Django training platform with role-based users, structured modules, quizzes, progress tracking, reassignment cycles, manager review, and sign-off workflows.
- Designed both systems around observed restaurant workflows, employee responsibilities, and real operational constraints; manage deployment, Linux services, backups, networking, database changes, and production troubleshooting.

Self-Taught Scholar — Interdisciplinary Learning Platform

- Created and launched a public learning platform for curious adults seeking to think clearly, connect ideas across disciplines, and use AI without surrendering intellectual agency.
- Developed a Four Schools framework spanning Story & Expression, Pattern & Play, Society & Self, and Making; designed the information architecture around connected concepts, essays, and learning paths.
- Continue to explore how conceptual relationships, project-based learning, and deliberately developed skills compound over time. selftaughtscholar.com

EDUCATION

M.S., Data Science | Tufts University | 2024

Completed while working full time. Coursework included machine learning, probabilistic systems, statistics, databases, artificial intelligence, reinforcement learning, security, web engineering, and big data.

B.S., Commerce | University of Virginia | 2010

Concentrations in Finance and Management; second major in Mathematics.

TECHNICAL SKILLS

Programming & web: Python, SQL, Django, Flask, HTML, CSS, JavaScript · Analysis: pandas, NumPy, scikit-learn, Power BI, Excel/VBA, Matplotlib, Plotly · Data & systems: PostgreSQL, SQLite, Git, Linux, Docker, nginx
